

**IN THE SPECIFICATION**

Please amend the paragraph on page 8, lines 13-17 as follows:

It is a feature of the invention that a single analyte can be measured. The DNA fragment, the RNA fragment, and each DNA and RNA base are examples of a single analyte. Other single analytes that can be measured by the method of the present invention include a dye, a therapeutic agent, and biological molecules such as a nucleotide (e.g., thymine, adenine, cytosine, guanine, or uracil), a nucleoside, and a neurotransmitter.
